Adobe

Dear Hiring Manager,

I am excited to apply for Adobe's Solutions Consulting Internship. I am pursuing a master's degree in Data Science at Columbia University, graduating in December 2027. My background spans consulting, operations, analytics, and AI product development - experiences that have taught me how to uncover stakeholders' needs, translate complex technical ideas into practical recommendations, and build solutions that create measurable business value. Adobe's combination of customer engagement, technical storytelling, and emerging AI capabilities makes this opportunity especially compelling to me.

Throughout my career, I have worked at the intersection of business challenges and technical execution. At Boston Consulting Group, I partnered with cross-functional client teams to translate complex questions into data-driven analyses supporting the go-to-market strategy for a \$10 billion infrastructure initiative. At Shopee, I analyzed seller performance, campaign effectiveness, and regional sales trends to inform strategies that contributed to more than \$100,000 in revenue and 25% year-over-year growth. I also developed automated Python and SQL pipelines for sales and P&L reporting, reducing manual processing time by 20%. These experiences strengthened my ability to listen carefully, structure ambiguous problems, and communicate recommendations to both business and technical stakeholders.

I have increasingly applied those skills to building and presenting AI-enabled products. During OpenAI Build Week, I collaborated with a teammate to design, develop, and present Axiom, a macOS application that uses AI to highlight important concepts and provide contextual explanations while users read. I also built ZephyrAQ, an AI-powered platform that integrates environmental and geospatial data to investigate pollution events and present likely causes with traceable evidence. Through these projects, I learned how to move from a user problem to a working product, explain technical functionality through a clear narrative, and demonstrate a solution in a way that emphasizes its practical value.

I would welcome the opportunity to bring this combination of customer-oriented problem-solving, analytical rigor, and hands-on AI development to Adobe. I am particularly excited to learn from experienced Solutions Consultants, contribute to customer discovery and live demonstrations, and help translate Adobe's AI and agentic capabilities into stories that resonate with each customer's goals. Thank you for your consideration.

Sincerely,

Morgan Le
