Charles River Associates
New York, NY

Dear Hiring Manager,

I am excited to apply for the Summer 2027 Management Advisory Analyst/Associate Internship at Charles River Associates. I am currently pursuing a master's degree in Data Science at Columbia University, where I also serve as a Graduate Teaching Assistant. Combined with my background in management consulting, business operations, and analytics, these experiences have shaped my interest in solving complex business problems and turning analysis into practical results.

Most recently, at Shopee, I focused on the growth of a paid seller support program, where sellers paid for dedicated support to improve their performance on the platform. I managed a team of 10 BPO managers supporting the program while also owning marketing campaigns and revenue forecasting. My role was to understand what was driving seller adoption and performance, identify opportunities to grow the program, and translate those insights into campaigns and operating plans. That meant working across the full cycle: analyzing seller and sales data, forecasting revenue, deciding where to focus our marketing efforts, and coordinating with the BPO team to execute those initiatives. Through this work, I helped the program generate more than \$100,000 in annual recurring revenue and achieve 25% year-over-year growth. The experience strengthened my ability to take ownership from analysis through execution while balancing growth targets with the practical realities of managing a team and operating a program day to day.

My broader career has also allowed me to approach these challenges from different perspectives. In operating roles, I learned how decisions translate into execution and measurable outcomes. At BCG, I gained experience approaching larger, more ambiguous strategic questions and structuring them through rigorous analysis. Now, through my master's in Data Science at Columbia, I am building a deeper technical foundation to complement those experiences. Together, this background has shaped how I approach problems: understanding the business context, using data to develop a clear direction, and staying close enough to execution to ensure that direction actually works.

CRA particularly appeals to me because of its combination of industry expertise and rigorous, fact-based analysis to develop clear, implementable solutions. I am particularly interested in the Life Sciences practice and the New York office. The opportunity to conduct industry and market research, analyze data, engage with clients and external stakeholders, and contribute to client reports and presentations closely matches my experience and goals. I would welcome the opportunity to bring my consulting experience, operational judgment, and technical fluency to CRA while developing a deeper understanding of the strategic and commercial questions facing pharmaceutical, biotechnology, and medical device companies.

Sincerely,
Morgan Le
