Grant Thornton

Dear Grant Thornton Hiring Team,

I am excited to apply for the Technology Transformation Associate - Summer 2027 position at Grant Thornton. I am currently pursuing a master's degree in Data Science at Columbia University, where I also serve as a Graduate Teaching Assistant. Before Columbia, my career spanned consulting, operations, and analytics. Across those roles, I found that the work I enjoyed most was not only understanding a business problem and recommending an answer, but also improving the processes and technology needed to make that answer work in practice. That is what draws me to technology transformation.

My career has repeatedly placed me between business needs and implementation. At BCG, I worked with cross-functional client teams to structure complex strategic questions and translate them into data-driven analysis. In operational roles at Samsung, Peloton, and Shopee, I worked closer to execution, using data to support decisions while improving the workflows behind them. Most recently, at Shopee, I analyzed seller and campaign performance and built automated Python and SQL pipelines for sales and P&L reporting. These experiences taught me that meaningful transformation requires more than a strong recommendation; it requires understanding how people work today and translating the desired future state into practical changes.

I have increasingly moved toward building those solutions myself. Through independent projects and hackathons, I have developed end-to-end applications involving APIs, databases, data pipelines, machine learning, and AI tools. My current research has also given me hands-on experience implementing and evaluating deep learning models and building reusable Python workflows for feature engineering, training, and evaluation. I enjoy learning new technologies, but I am most interested in using them purposefully: starting with the client or user need, choosing the appropriate approach, and iterating until the solution is genuinely useful.

Grant Thornton's Technology Transformation team would be a natural next step in that journey. The opportunity to work across industries, analyze client capabilities and processes, and help implement improvements in efficiency, revenue models, and customer experience closely matches the intersection of consulting and technical execution that I want to pursue. I would welcome the opportunity to bring my business judgment, analytical background, and growing technical depth to client engagements, contribute my perspective to Grant Thornton, and continue developing as a technology consultant.

Sincerely,
Morgan Le
