Roblox Corporation
San Mateo, CA

Dear Roblox Hiring Team,

I am excited to apply for the Product Manager Intern position at Roblox. I am currently pursuing a master's degree in Data Science at Columbia University after working across consulting, operations, and analytics. In those roles, I found that I most enjoyed understanding what people needed, breaking down unclear problems, and working across teams to turn insights into something useful. Product management appeals to me because it brings those parts together: learning from users and data, setting a clear direction, and partnering closely with technical and creative teams to build the product.

At Shopee, I analyzed seller performance, campaign effectiveness, and regional sales trends to inform promotional strategies that contributed to more than \$100,000 in revenue and 25% year-over-year growth. I also built automated data pipelines that reduced manual processing time by 20% and coordinated service delivery across more than 10 internal staff and BPO partners. The role taught me how to connect analysis with day-to-day execution, communicate across different stakeholders, and keep teams focused on outcomes rather than analysis alone.

My broader experience has helped me approach product questions from both strategic and technical perspectives. At BCG, I worked with cross-functional client teams on data-driven analysis for a \$10 billion infrastructure initiative and built market-sizing and financial models to support executive decisions. Outside of work, I have collaborated with teammates to build and present products through hackathons. I helped develop Axiom, an AI-powered reading application that highlights important concepts and provides contextual explanations, and built Dwellwise, a full-stack apartment planner with interactive 2D editing, collision checks, undo and redo, and a synchronized 3D sunlight preview. Building these products made me think carefully about how users move through complex workflows and how product decisions translate into working features.

Roblox stands out to me because product decisions can shape how millions of people play, create, and connect. I would be excited to learn from senior product managers while working with engineering, design, data science, and marketing partners from early discovery through launch. I believe my combination of analytical rigor, cross-functional operating experience, technical fluency, and curiosity about user behavior would allow me to contribute well to Roblox's product teams.

Sincerely,
Morgan Le
