ZS

Dear Hiring Manager,

I am excited to apply for the Advanced Data Science Associate Intern position at ZS. I am currently pursuing a master's degree in Data Science at Columbia University. My experience across machine learning research, management consulting, business operations, and analytics has shown me how technically rigorous solutions can help clients make better decisions and create meaningful real-world impact.

Most recently, as a Research Assistant at Vietnam National University, I implemented and fine-tuned deep learning models using PyTorch and benchmarked their performance on Vietnam-scale datasets against existing baselines. I also integrated a Geographical Random Forest model into an existing research pipeline and developed Python workflows for geospatial feature engineering, training, and evaluation. This experience strengthened my ability to work through the full modeling process, from preparing complex data and selecting an analytical approach to evaluating results carefully and communicating what they mean. Through independent projects, I have further applied machine learning, data pipelines, and LLM APIs to build end-to-end analytical tools and AI-powered applications.

My broader career has taught me how to connect that technical work to business context. At BCG, I partnered with cross-functional client teams to translate complex business problems into data-driven analyses supporting the go-to-market strategy for a \$10 billion infrastructure initiative. At Shopee, I applied statistical analysis to seller performance, campaign effectiveness, and regional sales trends, informing strategies that contributed to more than \$100,000 in revenue and 25% year-over-year growth. I also developed automated Python and SQL pipelines that consolidated sales and P&L data from multiple sources, reducing manual processing time by 20%. These experiences taught me that a strong analytical solution must be both technically sound and clear enough to guide action.

ZS particularly appeals to me because it brings together data science, technology, and deep client collaboration to improve outcomes for patients, caregivers, and consumers. The opportunity to develop advanced analytical solutions for large, complex datasets while working directly with clients closely matches the intersection of technical depth and practical problem-solving that I want to pursue. I would welcome the opportunity to contribute my research mindset, consulting experience, and proficiency in Python, SQL, machine learning, and deep learning to ZS's Insights & Analytics group while continuing to grow as a data scientist focused on high-impact problems.

Sincerely,
Morgan Le
