[Company Name]

[Company Address]

Dear [Company Name] Hiring Team,

I am interested in the [Forward Deployed Engineer] position at [Company Name]. I am a graduate student at Columbia University pursuing a master's degree in Data Science, with three years of professional experience spanning consulting, operations, and analytics. I believe my education and experience make me a strong match for this role.

I have been honing my engineering skills by building tools around real operational problems. At Shopee, I developed an internal subscription-management workflow using Google Sheets and Apps Script to track service timelines, identify overlapping subscriptions, and automate recurring operational processes, while also using Python and SQL to support analysis and reporting. Outside of work, I continue to strengthen my technical skills through graduate study, independent projects, and hackathons, where I experiment with emerging AI application patterns and keep up with new developments in areas such as context-aware systems, agentic workflows, and tool integration.

Throughout my experiences, I have also gained valuable client-facing and execution experience. At BCG, I worked with client teams to navigate the go-to-market process for a \$10 billion real estate development, helping structure key commercial questions and translate them into actionable analysis. At Peloton and Shopee, I worked across functions to align teams around shared goals and move initiatives forward. These experiences taught me how to build alignment, communicate across different stakeholders, and stay close to execution until a solution actually works in practice.

My education and professional experience have prepared me to contribute immediately to the [Forward Deployed Engineer] position at [Company Name]. I would be grateful for the opportunity to speak with the team and discuss how my background and experience could contribute to [Company Name]. Please feel free to contact me if I can provide any additional information.

Sincerely,

Morgan Le
